

CoreMaster by ★ STARLOGIXS

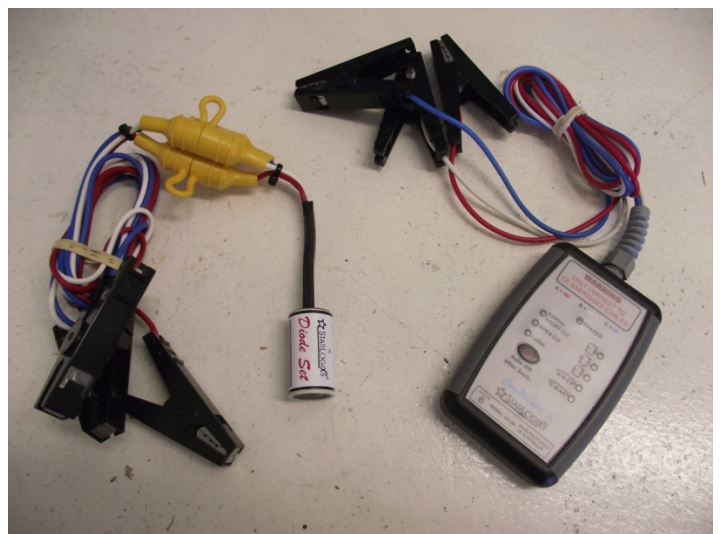

CoreMaster provides ease of mind for cable identification when laying underground 3 phase cables. Trifoil arrangements are often not colour coded for identification, making it difficult to ensure correct phasing. The StarLogixs CoreMaster has been specifically designed to solve this problem.

This unique phasing detector provides increased safety and reliability for personnel involved in cable laying services.

Possible implementations include overhead services and PAD mount transformers.

- Diode set (including protection from 5kV Meggar damage)
- Low battery indication
- Auto power off
- Water resistant
- Travel case included
